

EYUEL DAGNE

Seattle, WA

(507) 476-8034 | ras.dec19@gmail.com | linkedin.com/in/eyuel-dagne | github.com/ras-dec19

CORE SKILLS

Networking (CCNA-level): IPv4/IPv6, VLANs, trunking (native VLAN hardening, DTP disable), VTPv2, Rapid PVST+, EtherChannel (PAgP/LACP), inter-VLAN routing, HSRPv2, OSPF (Area 0, router IDs, passive interfaces), static routing & floating routes, NAT (static & PAT)

Network Services: DHCP (pools, exclusions, relay/ip helper-address), DNS, NTP (server/client with authentication), SNMP (read-only), Syslog (remote + buffered logging), FTP

Security & Hardening: SSHv2-only with VTY ACLs, standard/extended ACLs, PortFast, BPDU Guard, Port Security (sticky MAC, restrict), DHCP Snooping (trust + rate limiting, option 82 disabled), Dynamic ARP Inspection, CDP disable / LLDP enable

Network Automation: Python fundamentals for network scripting, REST API concepts, data formats (JSON/YAML), configuration templating (e.g., Jinja2), automation workflows with Ansible (playbooks/inventory), version control with Git, and repeatable config validation using CLI output parsing

Tools: Cisco Packet Tracer, Cisco IOS CLI, Wireshark (basic packet analysis), Linux/CLI

PROJECTS

CCNA Enterprise Network Mega Lab (Cisco Packet Tracer) | VLANs, OSPF, HSRP, STP, NAT, SSH, DHCP/DNS/NTP

- Built a multi-site, three-tier enterprise network (core/distribution/access) with redundant Internet edge connectivity and validated configurations to 100% completion.
- Implemented Layer 2 design: VLAN segmentation (user/voice/wireless or server/management), trunking with native VLAN hardening and DTP disabled, VTPv2 domain, and administrative shutdown of unused ports.
- Deployed EtherChannel using PAgP and LACP (Layer 2) and a Layer 3 EtherChannel between core switches; configured routed links and inter-VLAN routing on multilayer switches.
- Configured gateway and resiliency features: HSRPv2 across multiple VLANs per site and Rapid PVST+ with root-bridge priorities aligned to HSRP active/standby roles; enabled PortFast and BPDU Guard on edge ports.
- Implemented routing and edge behavior: OSPF Area 0 (manual router IDs, passive interfaces, point-to-point network type) and static + floating default routes with default route advertisement.
- Delivered network services and security: DHCP pools with exclusions and relay (ip helper-address), DNS records, authenticated NTP clients, SNMP (RO), Syslog forwarding/buffering, SSHv2-only access with VTY ACL restrictions, extended ACL policy, Port Security (sticky/restrict), DHCP Snooping, Dynamic ARP Inspection, and NAT (static + dynamic PAT).
- Configured basic IPv6 addressing (static/EUI-64/link-local) and IPv6 default routes; provisioned a WPA2-PSK WLAN on a WLC (dynamic interface + SSID) and verified LWAP association.

PROFESSIONAL EXPERIENCE

Information Technology Support Specialist

Nov 2020 – May 2022

Southwest Minnesota State University

Marshall, MN

- Resolved 100+ support tickets with emphasis on network access and connectivity (wired/wireless), account provisioning, and service availability across Windows/macOS/Linux.
- Diagnosed campus network incidents including DHCP lease failures, DNS resolution issues, IP conflicts, and default gateway misconfigurations; documented findings to speed escalation and root-cause analysis.
- Validated lab switch/router readiness using Cisco IOS **show** commands to confirm interface status, addressing, and baseline network behavior.
- Automated repetitive network checks by building Python utilities for reachability (ping), DNS validation, and basic log parsing, improving troubleshooting consistency and reducing manual steps.

EDUCATION

Bachelor of Science in Computer Science

Dec 2024

Southwest Minnesota State University

Marshall, MN

CERTIFICATIONS

Cisco Certified Network Associate (CCNA)

In Progress
